Easy Assembly Photo Wrap

Print - Wrap - Display!

JetMaster: The Smart alternative to Stretcher Bars...

The biggest hit in the art and photo market in recent years has been the gallery wrap. Hard-edged, impactful and undeniably stylish, gallery wraps make the perfect statement in the contemporary home, office and gallery.

The graphics and display industry is always looking for stylish, innovative and low-cost solutions. With Innova Art's JetMaster system, tough, lightweight 3-dimensional box frames can be turned out in minutes. It's the simple, cost effective way to make images really stand out.

The JetMaster base is available in the following sizes:
 US Letter/A4 / A3+ / 8x8" / 8x12" / 12x12" / 12x16" / 16x20".

Also available are the JetMaster mini- 5x5" and 5x7.5" which can be printed from a regular A4 desktop printer.

"The JetMaster Display System offers a cost-effective and simple alternative to a canvas print stretched over a wooden frame. It is a

lightweight and tough flat-pack base, made from a pre-cut, pre-laminated, corrugated-board template that folds to create a frame box...a completed frame box took me a few minutes. The wrap should not sag (unlike many wooden-frame canvas wraps)"

Tim Coleman - Amateur Photographer Magazine 2011

JET MASTER[®]

DISPLAY SYSTEMS

The process of making a JetMaster wrap couldn't be more straightforward. Photoshop templates, available as free downloads from the JetMaster website: www.jetmaster-systems.com/downloads, ensure that the prints are produced to the right size and shape.

For those who don't have access to Photoshop there is an online print utility that allows users to format their images to size at:

www.jetmaster.ultra-canvas.com
Then it is simply a matter of pressing down the print onto the pre-cut, self adhesive JetMaster base, trimming, folding – and hanging!

JetMaster frames - Available in bulk, trade packs of 10 and retail packs

| JetMaster system | Description | Media size | Printer required | Finished face size (mm) | Bulk | Trade | Retail |
